                  Carcinogenicity - Category 1B
                  Mutagenicity - Category 1B
ADDITONAL HAZARD IDENTIFICATION INFORMATION:

**PRIMARY ROUTE OF EXPOSURE:** Inhalation, Skin Absorption, Ingestion, Eye

**SIGNS & SYMPTOMS OF EXPOSURE**

**EYES:** May cause irritation, blurred vision.

**SKIN:** Prolonged contact may cause irritation and/or dermatitis.

**INGESTION:** Can cause gastrointestinal irritation.

**INHALATION:** Use with adequate ventilation. Inhalation of high vapor concentration may cause headaches and/or dizziness.

**ACUTE HEALTH HAZARDS:** See above.

**CHRONIC HEALTH HAZARDS:** See below.

**CARCINOGENICITY:** IARC has determined that occupational exposure to oxidized asphalt and its emissions is probably carcinogenic to humans (Group 2A). IARC concluded that available data from cancer studies in humans points to an association between exposures to oxidized asphalts during roofing and lung cancer and tumors in the upper aero-digestive tract. In addition, IARC found sufficient evidence of carcinogenicity in experimental animals for extracts and fume condensates of oxidized asphalts.

NIOSH has concluded that the collective data from human, animal, genotoxicity and exposure studies provide sufficient evidence that roofing asphalt fumes are a potential occupational carcinogen.
