

Build your next roof like the future depends on it. With EverGuard® PVC.

At GAF Commercial, we believe kids can learn more when their schools are secure, their roofs reliable, and their local budgets can be spent on teaching instead of repairing leaks.

K-12 roofs get put to the test in unique ways:

- **Disruption is not an option:** Schools work around strict seasonal and daily schedules. Roof construction or restoration must be carefully planned to avoid interruption or disruption.
- **Budgets are a community commitment:** Every dollar spent on a school roof represents a commitment to kids, parents, and — often — local taxpayers. They all deserve a roof that lasts a good long time, and comes with a guarantee to back that up.
- **Sustainability is 101.** A quality K-12 roof does more than protect itself from the damaging effects of weather and UV. It should also be engineered with sufficient insulation and a reflective membrane to help moderate heating and cooling costs, year-round, for the entire structure,* and utilize low- and no-VOC and/or Red List-Free materials formulated to help achieve green building certifications.

Fortunately, there's a roof membrane solution engineered specifically to deliver that head-of-the-class performance, while offering installation flexibility and labor-saving installation methods and accessories: **EverGuard® PVC roofing systems from GAF.**

* Energy cost savings are not guaranteed and the amount of savings may vary based on climate zone, utility rates, radiative properties of roofing products, insulation levels, HVAC equipment efficiency, and other factors.

Fast and easy installation

With a wide range of fast, reliable installation options, EverGuard® PVC and PVC KEE offer contractors and facility managers the flexibility to accommodate demanding education calendar timelines.

For example, GAF Quick Spray Adhesive for Smooth PVC and PVC KEE is one of the fastest installation methods available, providing an excellent finished look and wind-uplift resistance, and can be used at ambient temperatures as low as 40°F and rising.

Low-VOC adhesives include EverGuard® PVC #2331 Bonding Adhesive (a low-VOC contact adhesive) and EverGuard® PVC Quick-Lay Adhesive (a water-based option with minimal odor).

Your choice of adhered or mechanically attached may be driven by application needs, along with desired wind uplift and puncture resistance. Whichever system attachment you choose, you can plan on a fast return to service with minimal disruption.

The GAF EverGuard™ line of PVC products also includes a full range of accessories to reduce fabrication time on the roof.

30-year limited guarantees

Guarantees for qualified EverGuard® PVC KEE systems are available up to 30 years (up to 5 years longer than similar roofing systems using standard PVC)* so the roof you install today could still be in use when today's students' grandchildren are ready to start school.

For education projects, GAF walks the talk

At GAF, education drives how we work. Our world-class trainers lead the industry in teaching designers and roofers how to build efficiently, safely, reliably, and cost-effectively. GAF CARE (Center for the Advancement of Roofing Excellence) training, AIA CEU courses, and the Roofing Academy equip professionals young and old with the tools and training they need to succeed. To date, GAF CARE has trained more than a quarter million professional roofers nationwide, while the GAF Roofing Academy has helped more than 6,000 men and women transition into careers in roofing.

Manufactured in Cedar City, Utah

The GAF Cedar City plant produces a full line of Everguard® PVC and PVC KEE smooth and fleece-back membrane.

For complete details on GAF EverGuard® PVC and EverGuard® PVC KEE, refer to our full-line EverGuard® PVC Single-Ply Roofing Systems brochure at

* For qualified systems only. Additional requirements apply. Contact GAF for more information. See sample warranties and guarantees, available at gaf.com, for complete coverage and restrictions.
