Notes: 1) Measurements are rounded to the nearest whole number. 2) Rakes are defined as sloped roof edges. 3) Eaves are defined as level roof edges. 4) Flashing pertains to level roof edges and excludes valleys. 5) Step flashing pertains to sloped roof edges and excludes areas around penetrations. 6) Drip edge = eaves + rakes. 7) Waste table excludes additional materials needed for ridges, hips, valleys, etc. 8) Suggested waste factor is based on the roof complexity and is provided for guidance purposes only. You should confirm the appropriate waste factor prior to ordering.

Quantities of 5-gallon pails

Suggested waste is 5 to 10%

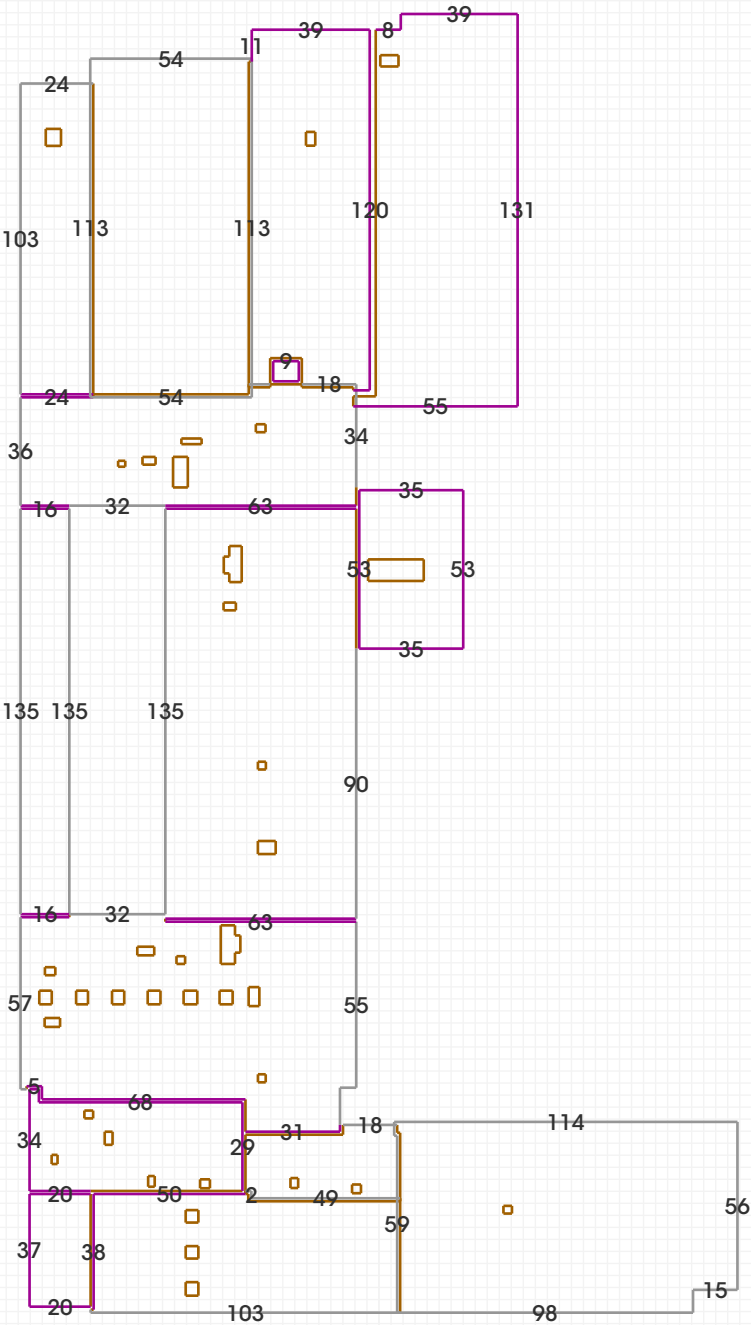

Notes: 1) These approximate quantities are based on estimated measurements and are for guidance purposes only. You should always confirm quantities prior to ordering and ensure you are following local building code requirements. 2) Product quantities are listed in 5-gallon pails. Quantities are rounded up to the nearest complete pail. 3) Primers are referenced as a guide and recommended when applying to various substrates. 4) Before coating is applied, an adhesion test is required to ensure an adhesion minimum of 2.0 pounds per linear inch (PLI). Test patches should be applied with rates listed on the quick specs. 5) Applicators should account for nominal waste and soak factors in various substrates when needing to achieve wet/dry mil thickness as required by the quick specs and specifications. 6) Roof coatings product calculations are calculated for areas with a 1/12 pitch and below. 7) Refer to the limited warranty on GAF liquid-applied roof coatings, available at [gaf.com](http://gaf.com), for complete coverage and restrictions. For application rates and other requirements for system guarantees and warranties, see liquid-applied roofing manual at [gaf.com](http://gaf.com).
