SINGLE-PLY ROOFING SYSTEMS

## Description

EverGuard® Polymat Separation Layer and EverGuard® Polymat Cushioning Layer are non-woven polyester mats used with single-ply roofing systems.

- EverGuard® Polymat Separation Layer is 3 oz./yd. (85 g/m<sup>2</sup>)
- EverGuard® Polymat Cushioning Layer is 6 oz./yd. (170 g/m<sup>2</sup>)
- Used beneath mechanically attached single-ply membranes in certain re-cover applications, as well as on top of membranes in ballasted single-ply systems

## Separation Layer

## Application

EverGuard® Polymat Separation Layer and EverGuard® Polymat Cushioning Layer may be installed on:

### Ballasted Systems

- Install separation mat loose-laid over the membrane, ensuring that wrinkles and buckles are not formed.
- Overlap separation mat a minimum of 6" (152 mm) for side and end laps.
- Immediately install ballast or pavers over the loose-laid separation mat.

### Mechanically Attached Systems

- Install polymat protection layer between the roofing membrane and the substrate in accordance with the EverGuard® TPO/PVC Mechanically Attached Roofing System Design Table(s).
- Install polymat protection layer loose-applied over substrate surface so that wrinkles and buckles are not formed.
- Overlap polymat protection layer a minimum of 6" (152 mm) for side and end laps.

See published application and specifications manual for detailed instructions.
