Information Sheet

*Quality You Can Trust Since 1886...
From North America's Largest Roofing Manufacturer™*

GRAVELGUARD MB™

DESCRIPTION:

GravelGuard MB is a 3-piece fascia system with a unique roof-flange design that creates a water & wind-proof seal at the building perimeter.

RECOMMENDED USES:

Designed for use at exterior roof perimeters to seal membrane and stripping plies tightly against the building face. Standard 4" size (type US1 400) covers single 2X wood nailers and most membrane combinations.

May be used at roof level or as a fascia termination at the top exterior face of membrane covered parapets.

Custom face heights to meet special conditions, or higher front gravelstop edges, are available upon request. Modified designs may not meet FM criteria. Consult the factory if FM rating is important.

ADVANTAGES:

Rigid quality control assures superior looks and outstanding performance...every time.

Unique perforated top plate allows cap sheet to bond with preflashing for a tight perimeter seal.

Precut accessory corners and punched fastener holes eliminate field labor.

Available in a variety of metals and architectural finishes to meet your needs.
