## Understanding the ASTM

Understanding the ASTM (American Society for Testing and Materials) standard is key to understanding and evaluating GAF polyiso products. ASTM C1289 is the main standard used when evaluating polyiso physical properties. This specification covers the general requirements for faced thermal insulation boards. “Faced” means that boards composed of rigid cellular polyisocyanurate are surfaced (or faced) with other materials. ASTM compliant polyiso meets their test criteria accordingly.

### ASTM C1289

<table>
<thead>
<tr>

**Available in Grade 2 (20 psi) standard or Grade 3 (25 psi)**

- EnergyGuard™ Polyiso Insulation
- EnergyGuard™ Tapered Polyiso Insulation
- EnergyGuard™ NH Polyiso Insulation
- EnergyGuard™ NH Tapered Polyiso Insulation

**Available in Grade 2 (20 psi) standard or Grade 3 (25 psi)**

- EnergyGuard™ Ultra Polyiso Insulation
- EnergyGuard™ Ultra Tapered Polyiso Insulation
- EnergyGuard™ Ultra NH Polyiso Insulation
- EnergyGuard™ Ultra NH Tapered Polyiso Insulation
- EnergyGuard™ Barrier Polyiso Insulation
- EnergyGuard™ NH Barrier

**Grade 1, 80 psi min to 109 psi max**

- EnergyGuard™ HD Polyiso Cover Board
- EnergyGuard™ NH HD Polyiso Cover Board
- EnergyGuard™ HD Barrier Polyiso Cover Board

**Grade 2, 110 psi min to 139 psi max**

- EnergyGuard™ HD Plus Polyiso Cover Board
- EnergyGuard™ NH HD Plus Polyiso Cover Board

*Not all products are available at all manufacturing facilities.

**When evaluating the compressive strength of cover boards the ASTM recognizes them as follows, ASTM C1289 Type II Class 4, and they come in three grades.

ASTM compliance for compressive strength is achieved by meeting the minimum value. The table shows that “Grade 1” cover board falls between a minimum compressive strength of 80 psi and a maximum compressive strength of 109 psi. Some polyiso manufacturers list their compressive strength as the maximum value of that Grade, for example Grade 1 as (109 psi max) on their literature. A board is in compliance as long as it is within the ASTM stated range - a minimum of 80 to a maximum of 109 for Grade 1, and a minimum of 110 to a maximum of 139 for Grade 2.

A composite cover board is categorized by ASTM by the two types of components that are used in the assembly of the product. Ex: Ultra HD Composite Insulation is comprised of EnergyGuard™ HD (ASTM C1289 Type II Class 4 Grade 1), and EnergyGuard™ Ultra (ASTM C1289 Type II Class II Grade 2).
