

GRO MINERAL WOOL

GRO Mineral Wool is a lightweight, efficient stormwater retention product with a very high volumetric water retention capacity and high compressive strength. It can capture and hold over 10 times its own weight in water. Retained water is available to green roof vegetation, while the rest of the water evaporates after a time delay. Located below the vegetation layer, GRO Mineral Wool is super-absorbent, flexible and can be cut to fit any design, and offers a horticultural approach to stormwater management for green roof systems.

MATERIAL	Mineral Wool
DIMENSIONS	16.4' x 3.28' x 1' high; 53.8 ft ² per roll
DRY WEIGHT	48 lbs /roll
WET WEIGHT	4.9 lbs/ft ² (ASTM E2397)
RETAINED WATER	0.54 gal/ft ²
RETAINED WATER VOLUME	≥ 89%
