Environmental Product Declaration GAF EverGuard® SA TPO Self-Adhered Roof Membrane

GAF, a Standard Industries company, is the leading roofing and waterproofing manufacturer in North America. For more than 135 years, GAF has been trusted to protect what matters most for families, communities and business owners with its innovative solutions and focus on customer service. GAF's leadership extends to its commitment to making a positive impact on its communities, industry, and planet. Learn more at www.GAF.com.

GAF EverGuard® SA TPO Self-Adhered Roof Membrane is ready to install direct from the factory.

GAF EverGuard® SA TPO Self-Adhered Roof Membrane

Single Ply Roofing Membrane (TPO)

According to ISO 14025, ISO 14044, and ISO 21930:2017

This declaration is an environmental product declaration (EPD) in accordance with ISO 14025 and ISO 21930-2017. EPDs rely on Life Cycle Assessment (LCA) to provide information on a number of environmental impacts of products over their life cycle. Exclusions: EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g., Type 1 certifications, health assessments and declarations, environmental impact assessments, etc. Accuracy of Results: EPDs regularly rely on estimations of impacts, and the level of accuracy in estimation of effect differs for any particular product line and reported impact. Comparability: EPDs are not comparative assertions and are either not comparable or have limited comparability when they cover different life cycle stages, are based on different product category rules or are missing relevant environmental impacts. EPDs from different programs may not be comparable.

This life cycle assessment was conducted in accordance w reference PCR by:					
This life cycle assessment was independently verified in ac and the reference PCR by:	cordance with ISO 14044 Jack Geibig, EcoForm, LLC jgeibig@ecoform.com				

Environmental declarations from different programs (ISO 14025) may not be comparable.

Comparison of the environmental performance using EPD information shall consider all relevant information modules over the full life cycle of the products within the building.

This PCR allows EPD comparability only when the same functional requirements between products are ensured and the requirements of ISO 21930:2017 §5.5 are met. It should be noted that different LCA software and background LCI datasets may lead to differences results for upstream or downstream of the life cycle stages declared.

GAF EverGuard® SA TPO Self-Adhered Roof Membrane

Single Ply Roofing Membrane (TPO)

General Information

Description of Company/Organization

Founded in 1886, GAF is the leading roofing manufacturer in North America. As a member of the Standard Industries family of companies, GAF is part of the largest roofing and waterproofing business in the world. The company's products include a comprehensive portfolio of roofing and waterproofing solutions for residential and commercial properties as well as for civil engineering applications. The full GAF portfolio of solutions is supported by an extensive national network of factory-certified contractors. GAF continues to be the leader in quality and offers comprehensive warranty protection on its products and systems. The company's success is driven by a commitment to empowering its people to deliver advanced quality and purposeful innovation. For more information about GAF, visit www.gaf.com.

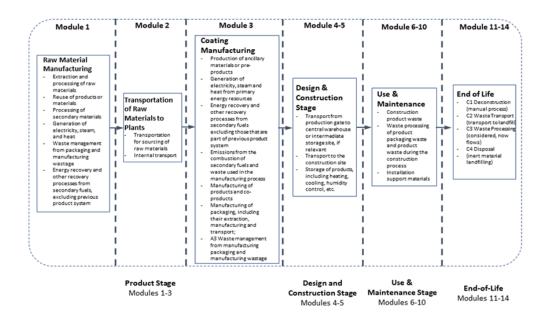

Product Description

GAF EverGuard® SA TPO Self-Adhered Roof Membrane is ready to install direct from the factory. The factory-applied hot melt pressure sensitive adhesive (HMPSA) helps to retain bonding power at temperatures down to 20°F can help you save time and labor. No waiting for flash-off and no adhesive containers to dispose of. GAF EverGuard® SA TPO Self-Adhered Roof Membrane is suitable for jobs on occupied buildings where odor associated with traditional solvent-based adhesives are a concern.

The products included in this EPD are:

- EverGuard® TPO Self-Adhered 60-mil Membrane
- EverGuard® TPO Self-Adhered 80-mil Membrane

Flow Diagram

GAF EverGuard® SA TPO Self-Adhered Roof Membrane

Single Ply Roofing Membrane (TPO)

Manufacturer Specific EPD

This product-specific EPD was developed based on the cradle-to-gate with options (modules A1-A5, C1-C4) Life Cycle Assessment. The EPD accounts for raw material extraction and processing, transport, product manufacturing, distribution, installation, and disposal. Manufacturing data were gathered directly from company personnel. For any product group EPDs, an impact assessment was completed for each product. Product grouping was considered appropriate if the individual product impacts differed by no more than ±10% in any impact category. Average product representations were determined by conducting a weighted average of the manufacturing inventory based on total production in the reference year. Product formulations are consistent between different thicknesses of a product group and across various manufacturing sites.

Application

EverGuard® TPO membrane is a single-ply roofing product and is designed to be used as an outer roof layer, either in new construction or re-covering applications.

Material Composition

The primary product components and/or materials must be indicated as a percentage mass to enable the user of the EPD to understand the composition of the product in delivery status.

The average composition of a EverGuard® SA TPO Self-Adhered Roof Membrane Single Ply Roofing Membrane (TPO) is as follows:

	Percentage in mass (%)
Material	Value
TPO Resin	60-75%
Polyester Scrim	2-5%
UV Weathering Agent	2-5%
Filler	18-30%
Pigment	1-10%
Total	0.00%

^{**}The GAF product modelled in this study contains no substances that are required to be reported as hazardous, nor are any such substances utilized in its production.

GAF EverGuard® SA TPO Self-Adhered Roof Membrane

Single Ply Roofing Membrane (TPO)

According to ISO 14025, ISO 14044, and ISO 21930:2017

Placing on the Market / Application Rules

The standards that can be applied for EverGuard® TPO SA Membrane are:

- ASTM D751
- ASTM D573
- ASTM D2137
- ASTM E96
- ASTM D1204
- ASTM D6878

Properties of Declared Product as Shipped

After manufacturing, the product is prepared for shipment to the customer. The membrane is reeled on a cardboard core and wrapped in plastic film. Additional packaging materials include product labels, a cardboard protective sheet and steel strap. The product is then shipped on wooden pallets to the customer.

GAF EverGuard® SA TPO Self-Adhered Roof Membrane

Single Ply Roofing Membrane (TPO)

Methodological Framework

Declared Unit

The declaration refers to the declared unit of 1 m² as specified in the PCR.

Name	Value	Unit
Declared unit	1 m²	
Weight per declared unit	1.69	kg
Thickness to achieve Declared Unit	60	mm

System Boundary

This is a cradle-to-gate with options Environmental Product Declaration intended for Business-to-Business (B2B) purposes. The following life cycle phases were considered:

Description of the System Boundary Stages Corresponding to the PCR

(X = Included; MND = Module Not Declared)

Reference Service Life

The reference service life of GAF EverGuard® SA TPO Self-Adhered Roof Membrane is not declared due to the exclusion of the use-phase.

Allocation

Co-product allocation was determined on a mass basis.

^{*}This includes provision of all materials, products and energy, packaging processing and its transport, as well as waste processing up to the end-of waste state or disposal of final residues.

GAF EverGuard® SA TPO Self-Adhered Roof Membrane

Single Ply Roofing Membrane (TPO)

Cut-off Criteria

Processes whose total contribution to the final result, with respect to their mass and in relation to all considered impact categories, is less than 1% can be neglected. The sum of the neglected processes may not exceed 5% by mass of the considered impact categories. For that a documented assumption is admissible.

For Hazardous Substances the following requirements apply:

- The Life Cycle Inventory (LCI) of hazardous substances will be included, if the inventory is available.
- If the LCI for a hazardous substance is not available, the substance will appear as an input in the LCI of the product.
- If the LCI of a hazardous substance is approximated by modeling another substance, documentation will be provided.

This EPD is in compliance with the cut-off criteria. No processes were neglected or excluded. Capital items for the production processes (machine, buildings, etc.) were not taken into consideration.

Data Sources

Primary data were collected for every process in the product system under the control of GAF. Secondary data from the Sphera (GaBi Content Version 2022.1) and USLCI databases, 2012, were utilized when necessary. These data were evaluated and have temporal, geographic, and technical coverage appropriate to the scope of the product category.

Data Quality

The data sources used are complete and representative of global systems in terms of the geographic and technological coverage and are a recent vintage (i.e., less than ten years old). The data used for primary data are based on direct information sources of the manufacturers. Secondary data sets were used for raw materials extraction and processing, end of life, transportation, and energy production flows. Wherever secondary data is used, the study adopts critically reviewed data for consistency, precision, and reproducibility to limit uncertainty. When a material is not available in the available LCI databases, another chemical which has similar manufacturing and environmental impacts may be used as a proxy, representing the actual chemical.

Important data quality factors include precision (measured, calculated, or estimated), completeness (e.g., unreported emissions or excluded flows), consistency (uniformity of the applied methodology throughout the study), and reproducibility (ability for another researcher reproduce the results based on the methodological information provided). Each dataset has an overall rating from one to four, one being "very good" and four being "poor." The individual datasets were scored and aggregated to determine the data has an overall average rating of 2.1.

Period Under Review

The period under review is the full calendar year of 2021.

Treatment of Biogenic Carbon

The uptake and release of biogenic carbon throughout the product life cycle follows ISO 21930:2017 Section 7.2.7.

Comparability and Benchmarking

A comparison or an evaluation of EPD data is only possible if all data sets to be compared were created according to ISO 21930 and the building context, respectively the product-specific characteristics of performance, are taken into account. Environmental declarations from different programs may not be comparable. Full conformance with the PCR allows for EPD comparability only when all stages of a product's life cycle have been considered, and the same sub-category PCR, when applicable. Additionally, the functional/declared unit must also be comparable. However, variations and deviations are possible. In order to support comparative assertions, this EPD meets all comparability requirements stated in ISO 14025:2006. However, differences in certain assumptions, data quality, and variability between LCA data sets may still exist. As such, caution should be exercised when evaluating EPDs from different manufacturers as the EPD results may.

Units

GAF EverGuard® SA TPO Self-Adhered Roof Membrane

Single Ply Roofing Membrane (TPO)

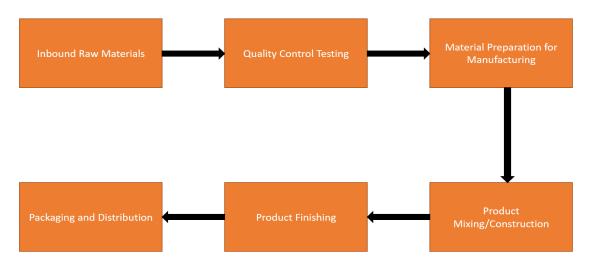

Life Cycle Inventory and Scenarios

Background data

For life cycle modeling of the considered products, the LCA for Experts v. 10.6 Software System for Life Cycle Engineering, developed by Sphera, is used. The Sphera and USLCI databases contain consistent and documented datasets which are documented online. To ensure comparability of results in the LCA, the basic data of the Sphera database were used for energy, transportation, and auxiliary materials.

Manufacturing

Single Ply Roofing Membrane (TPO) is manufactured in Cedar City, Utah; Gainesville, Texas; New Columbia, Pennsylvania; Statesboro, Georgia; Mt. Vernon, IN and begins with the inbound reception of raw materials. The process begins with adding polymers, performance enhancing ingredients, and other option ingredients to a mixer. The inputs are blended, heated, and then extruded onto the top and bottom of a scrim to form laminated layers. The membrane is then cooled by passing through a series of rollers, wound into rolls or cut to size, and packaged for shipment. The table below describes which facility(ies) produce the product of the study. If multiple facilities produced the product, then a weighted average of total production was used to produce an average life cycle inventory from those facilities.

Product Type	Manufacturing location
	Cedar City, UT
TPO	Gainesville, TX
	Mount Vernon, IN
	New Columbia, PA
	Statesboro, GA

Packaging

The packaging material is composed primarily of plastic materials. Single ply roofing products are shipped on pallets and wrapped in plastic film.

	Quantity (% By Weight)
Material	Value
Cardboard	1.10%
Wood	23.34%
Paper	2.51%
Plastic	73.04%
Total	100.00%

GAF EverGuard® SA TPO Self-Adhered Roof Membrane

Single Ply Roofing Membrane (TPO)

LCA Interpretation for the EverGuard® SA TPO 60-mil Membrane

The production life cycle stage (A1-A3) dominates the impacts across all impact categories. This is due to the upstream production of materials used in the product, along with natural gas use in the manufacturing of the product. The end-of-life disposal stage (C4) has significant impact in global warming potential, acidification, and eutrophication due to the 100% landfill assumption.

Emerging LCA impact categories and inventory items are still under development and can have high levels of uncertainty that preclude international acceptance pending further development. Use caution when interpreting data in these categories:

- renewable primary energy resources as energy (fuel), (RPRE);
- renewable primary resources as material, (RPRM);
- non-renewable primary resources as energy (fuel) ,(NRPRE);
- non-renewable primary resources as material (NRPRM);
- secondary materials (SM);
- renewable secondary fuels (RSF);
- non-renewable secondary fuels (NRSF);
- recovered energy (RE);
- abiotic depletion potential for non-fossil mineral resources (ADPelements).
- land use related impacts, for example on biodiversity and/or soil fertility;
- toxicological aspects;
- emissions from land use change [GWP 100 (land-use change)];
- hazardous waste disposed;
- non-hazardous waste disposed;
- high-level radioactive waste;
- intermediate and low-level radioactive waste;
- components for reuse;
- materials for recycling;
- materials for energy recovery; and
- recovered energy exported from the product system.

GAF EverGuard® SA TPO Self-Adhered Roof Membrane

Single Ply Roofing Membrane (TPO)

LCA Interpretation for the EverGuard® SA TPO 80-mil Membrane

The production life cycle stage (A1-A3) dominates the impacts across all impact categories. This is due to the upstream production of materials used in the product, along with natural gas use in the manufacturing of the product. The end-of-life disposal stage (C4) has significant impact in global warming potential, acidification, and eutrophication due to the 100% landfill assumption.

Emerging LCA impact categories and inventory items are still under development and can have high levels of uncertainty that preclude international acceptance pending further development. Use caution when interpreting data in these categories:

- renewable primary energy resources as energy (fuel), (RPRE);
- renewable primary resources as material, (RPRM);
- non-renewable primary resources as energy (fuel) ,(NRPRE);
- non-renewable primary resources as material (NRPRM);
- secondary materials (SM);
- renewable secondary fuels (RSF);
- non-renewable secondary fuels (NRSF);
- recovered energy (RE);
- abiotic depletion potential for non-fossil mineral resources (ADPelements).
- land use related impacts, for example on biodiversity and/or soil fertility;
- toxicological aspects;
- emissions from land use change [GWP 100 (land-use change)];
- hazardous waste disposed;
- non-hazardous waste disposed;
- high-level radioactive waste;
- intermediate and low-level radioactive waste;
- components for reuse;
- materials for recycling;
- materials for energy recovery; and
- recovered energy exported from the product system.

Single Ply Roofing Membrane (TPO)

Additional Environmental Information

Environmental and Health During Manufacturing

During the manufacturing of EverGuard® TPO SA Membrane, all legal regulations regarding emissions to air, wastewater discharge, solid waste disposal and noise emissions are followed.

Environmental and Health During Installation

There is no harmful emissive potential. No damage to health or impairment is expected under normal use corresponding to the intended use of the product.

Extraordinary Effects

Fire

Resistance by the roofing system to fire applied to the exterior roof surface is important. Typically, a UL Class B or C rating is required by building code. Also, depending on the use and size of the building and the construction type, fire resistance to fire originating from within the building may be required. This is normally expressed in the form of hourly ratings, and usually requires the use of a specialized roof assembly. Refer to current EverGuard® listings in the appropriate UL directory to verify roof assembly requirements for specific fire ratings.

Water

No environmental impacts are expected due to water exposure of properly installed EverGuard® SA TPO Self-Adhered Roof Membrane.

Mechanical Destruction

EverGuard® TPO SA Membrane has excellent mechanical strength. The breaking strength and elongation at break performance are measured by ASTM D751.

Delayed Emissions

Global warming potential is calculated using the TRACI 2.1 and CML 4.1 impact assessment methodologies. Delayed emissions are not considered.

Environmental Activities and Certifications

N/A
