

# TECHNICAL ADVISORY BULLETIN

To: GAF Residential Sales, GAF Contractors, GAF Field Services

From: Technical Services Department

**Subject: Hand-Sealing Shingles**

Quality You Can Trust...  
From North America's  
Largest Roofing Manufacturer!™

Issued Date: 05/06/2011

Revised Date: 08/17/2016

No: TAB-R-2011-114

## What Is Hand-Sealing?

**Hand-sealing is...** the method to assure and enhance sealing of shingles with roofing cement (ASTM D4586) on very steep slopes, in high wind areas, and when installing in cold weather.

**GAF may choose to hand-seal a roof or slope of a roof...** if there has been insufficient heat or sun exposure to seal shingles and blow-off damage has occurred. This does not mean that the sealant is defective, only that there has not been sufficient heat to activate the sealant. Failure of a shingle to seal due to insufficient heat is not a manufacturing defect.

## When Should Shingles Be Hand-Sealed?

Hand-seal shingles when installing...

- In cold weather, fall or winter
- On steep slopes (greater than 21:12 roof slopes)
- On mansard roofs
- While performing repairs
- After installation of accessories, such as power vents or skylights
- Shingles up the rake of the roof for added wind protection
- In wind-blown dust/sand areas

## How Done Hand Sealing Get Done?

**Check shingle application instructions...** to determine the number and location of the dabs of cement to be used for and sealing. All GAF shingle application instructions have hand-sealing procedures listed. Follow the instructions for the particular product to be sealed.

- **Use a caulking gun or small trowel...** to place dabs of cement under the shingle to be sealed.
- **Use a quarter sized dabs of cement...** as a guide to judge the correct amount of cement to be used.
- **Press shingle into cement...** to fully seal these shingles.

Note: Too much cement can run down the face of the shingle or cause blistering.

## Where Can I Get More Information?

**GAF Technical Services Can Assist You...** with these and other questions you may have regarding your new roof installation. GAF Technical Services can be contacted at **800-ROOF-411** (800-766-3411). Also, the GAF website is a great resource for just about any question you may have or for additional information you may require. Please visit [www.gaf.com](http://www.gaf.com) to find the latest information on our products and their installation.

**Important:** This document supersedes any prior GAF Technical Advisory Bulletins on this topic. Please always check [www.gaf.com](http://www.gaf.com) to make sure you have the most up to date information.
